

# Designing a user interface, principles

Fabrice.Kordon@lip6.fr

# As an introduction...

## **User interfaces are complex to implement**

- Objective, make it easier
  - ▶ Remember the «ecosystem»
- Several ways to do it

## **Draw your interface («Kindergarten mode» )**

- «clickodrome» letting you not care about «what's inside»
- Quite complete but sometimes «magical»

## **The programmatic way («geek mode» )**

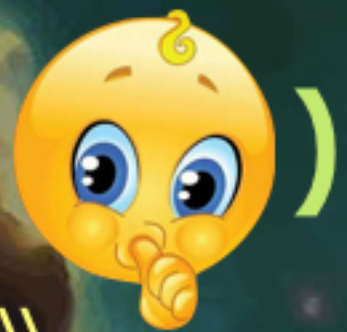

- You can do whatever you want (out of predefined tracks)
- Details mastering of the interface (if you know how)

# As an introduction...

## **User interfaces are complex to implement**

- Objective, make it easier
  - ▶ Remember the «ecosystem»
- Severo

**What's in «real life»?**  
Often use of the two ways  
**You must know...**  
One mode relies on the other...  
... guess which one?

## **Draw**

- «clicko
- Quite o

## **The programmatic way («geek mode»**

- You can do whatever you want (out of predefined tracks)
- Details mastering of he interface (if you have know how)

# Storyboard, how does it work?

## User interface

- You draw your views
  - ▶ Set-up constraints
- You script your application
- You link graphical elements to code

## Generation of «autolayout code»

- Autolayout introduced with iOS6 (2012)
- Positioning elements relatively to others
  - ▶ Possibles links
  - ▶ Constraints relatives to the screen (edges, width, height)

## By the way, Autolayout can be programmed

- yet another way to build interfaces

# About screen resolution

## Available screens

- 480x320 (deprecated since Xcode 5.5 / disappeared)
- 960x640 Retina 3.5'' (deprecated / disappearing)
- 1024x768 (deprecated / disappearing)
- 1136x640 Retina 4''
- 1334x750 Retina 4.7''
- 1792x828 Liquid retina 6.1'' 
- 1920x1080 Retina HD 5.5''
- 2224x1668 Retina for iPadPro 10.5''
- 2436x1125 Retina HD 5.8'' for iPhone X & Xs
- 2688x1242 Retina HD 6.5'' for iPhone Xs Max 
- 2732x2048 Retina for iPadPro 12.9''

# About coordinates in views

## Size of a pixel depends on the screen density

- Retina display 264 ppi (iPad 3 to 5, iPad pro)
- Retina display 326 ppi (iPhone 4 to 8, iPad mini)
- Retina HD Display 401 ppi (iPhones 6+ to 8+)
- Super Retina HD Display 458 ppi (iPhone X, Ss, Xs Max, Xr)
- etc.

## There need to be an uncorrelated unit

- Solutions comes from printing technology

**Size unit for characters**

- Super Retina HD Display (iPhone 11 Pro, 11 Pro Max, Xr)
- etc.

**Coordinates in views?**  
in points too...

## There need to be an uncorrelated unit

- Solutions comes from printing technology

**Size unit for characters**  
points

# About devices

## Two types of devices

- Small devices
  - ▶ Ipod, iPhone
- Large devices
  - ▶ iPad, iPad mini, iPad Pro
- «in between»
  - ▶ iPhone «plus» or «Max»

**Adaptable interface items**  
Best use of the screen size

## Device orientation

- Handled by StoryBoard (if well configured)
- Handled programmatically
  - ▶ Call-back mechanisms to be studied later

# Please avoid this!

## Management with «magic numbers» as coordinates

**Solutions to that problem?**  
Use of constraints  
Reasoning with ratio

# As a conclusion...

## Remember the importance of the «ecosystem»

- Apple needs «troops» to increase it
- Android have similar interface design modes

## «Kindergarten» mode is useful

- As computer scientists, you must go deeper
- We will use it (a few weeks)
  - ▶ Then we will investigate the «Geek mode»
