

# Model View Controller (MVC)

Fabrice.Kordon@lip6.fr

# Model View Controller?

## Design pattern

- 1995, «gang of four»
  - ▶ Origin, C. Alexandre (A pattern language — architecture)
- Rules for «smart programming»
  - ▶ Clarifies relationships between classes
  - ▶ Ease maintenance
  - ▶ Refined over the years
- There are numerous patterns
  - ▶ Delegation is one
  - ▶ Client-server is another one

## To know more...

# Everything You Always Wanted to Know About MVC\*

3

- Describe data
- Characterize the state

**Model**

\*But Were Afraid to Ask

# Everything You Always Wanted to Know About MVC\*

3

- Controls the system
- Handles actions
- Relies on data
- Relies on visualization

**Model**

**Controller**

\*But Were Afraid to Ask

# Everything You Always Wanted to Know About MVC\*

3

- interface to the user
- Offers «actuators»

**Model**

**Controller**

**View**

\*But Were Afraid to Ask

A class

Shame on me...

In my examples, when the code is concise, I do not systematically follow the MVC model

A class  
erited from  
UIView

Model

Controller

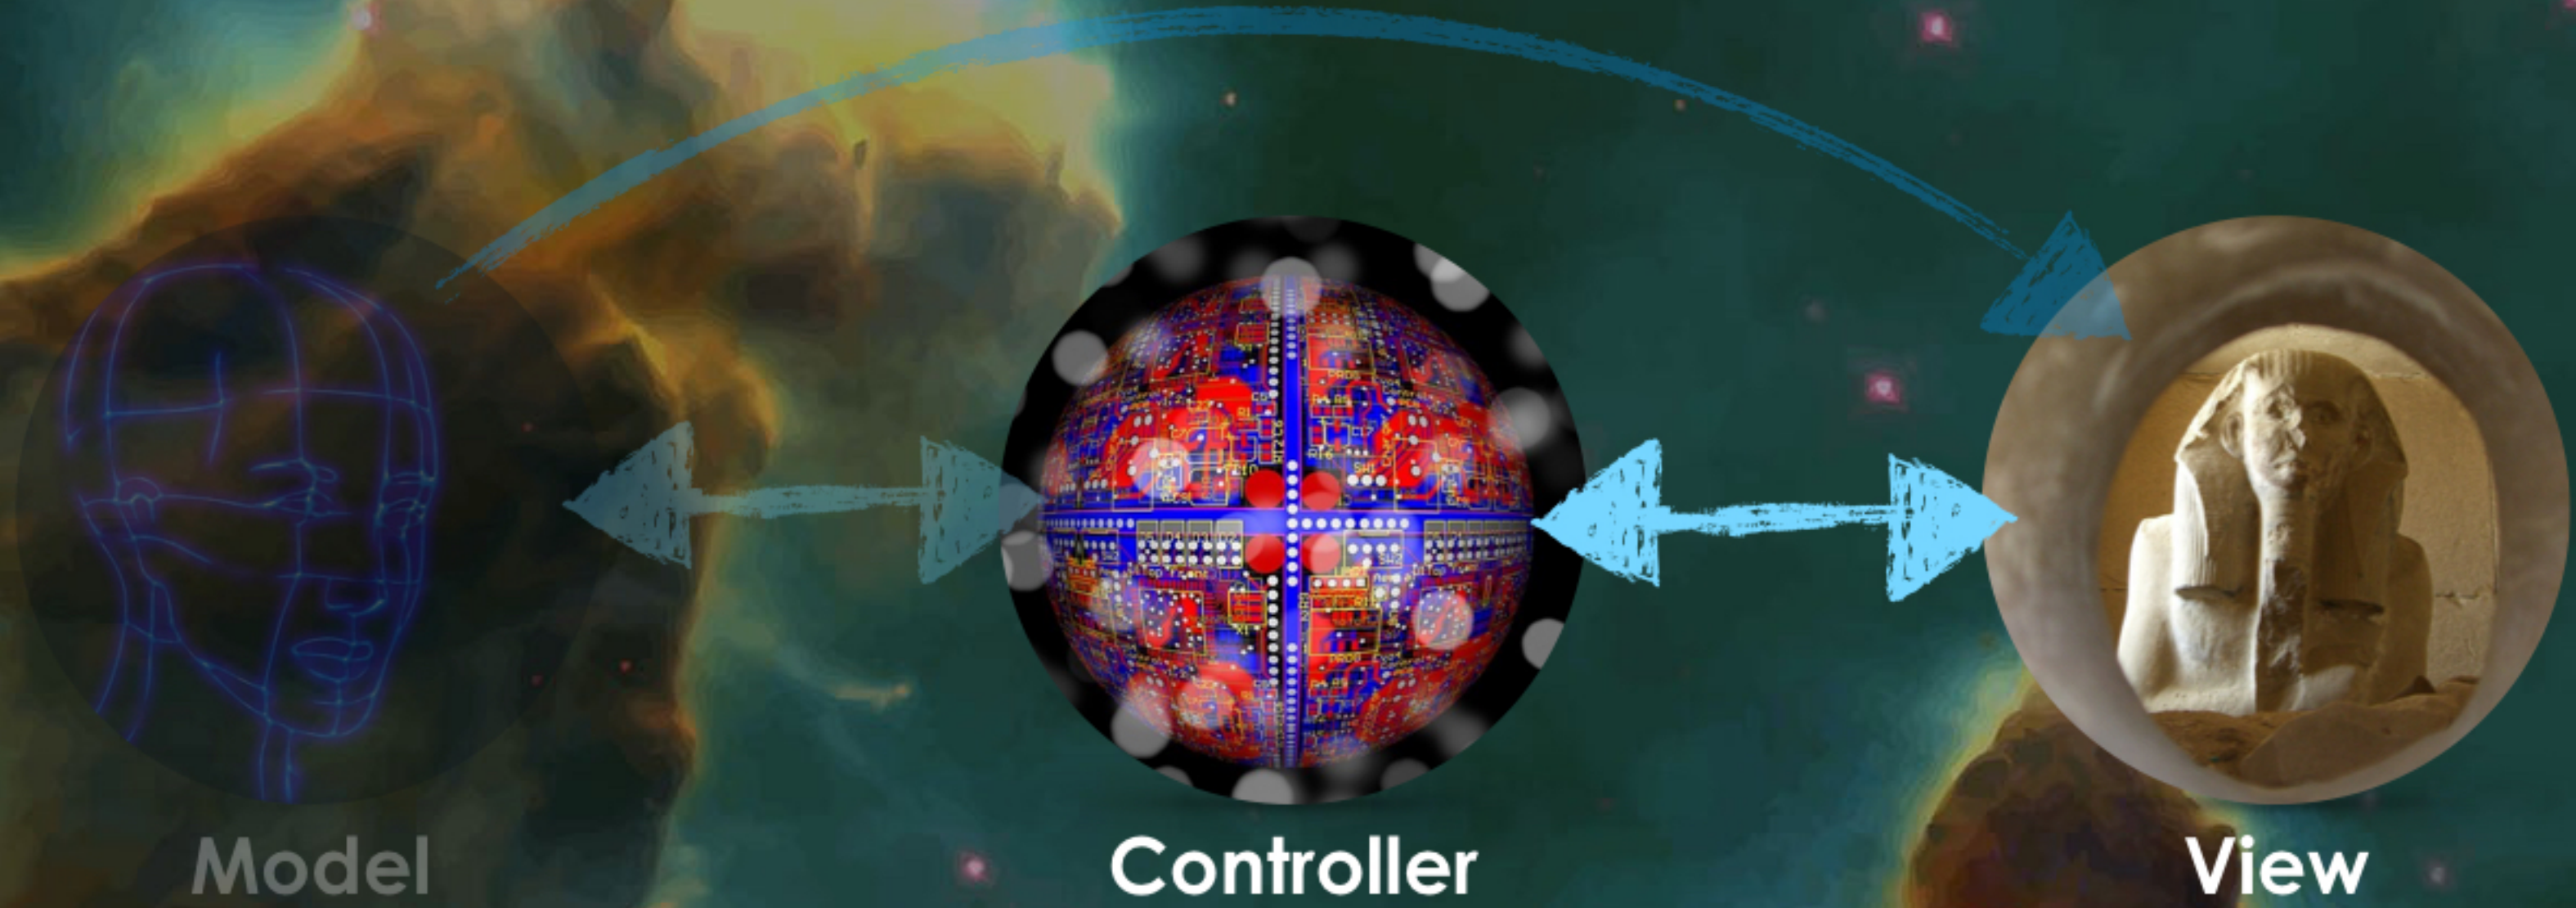

View

\*But Were Afraid to Ask

# MVC for «ColorChart»

Model

Controller

View

## No real model

- 3 variables or a 3 entries array

## ViewController

- Builds the view + catch events + orientation

## ColorChartView

- Display

# MVC for «quizz»

## Model

- Questions, answers and their context (displayed or not, etc.)

## Controller

- Builds the view + catch events + orientation

## ColorChartView

- Display

# As a conclusion...

## Now you know MVC

 You have no excuses..

## It is easy to apply

 Moreover, this is typical in User interfaces

- ▶ iOS
- ▶ Android
- ▶ Unix/X11
- ▶ etc.
